FUNCTION

The Analog Calculator is used for calculations such as addition, subtraction and linearization of analog values which as a result have an analog signal in kind of a current or a voltage. Due to its customized setting of all individual input signals, the mode of calculation and the output signal the device has a large range of application. It is equipped with bipolar current inputs as well as a current and voltage output.

The AS 3.00 SDC is being parameterized by the USB2 adapter in connection with KALIB-Software. The basic calculation units can be selected directly, linearizations are produced by a table of values and a polynomial calculation with optimization. Actual measured values of input and output can also be visualized.

Connection diagram:

Input:

I: DC current (bipolar): -20...0...+20 mA; input resistance approx. 10 Ω
 connection: E1 = terminal 8 -, 7 + ; E2 = terminal 8 -, 6 + ; E3 = terminal 8 -, 5 +
 Adjustable per input: range start, range end: -20,5...0...+20,5 mA
 Cut-Off-Min: on falling below this value is set as input
 Cut-Off-Max: on exceeding this value is set as input
 error limit Min: on falling below a defined fixed value is set as output
 error limit Max: on exceeding a defined fixed value is set as output
 evaluation of input between -100%...0%...+100%
 (with -100%...0% calculated inversion of input)

Basic calculating: output = E1 + E2 + E3
 output = E1 × E2
 output = E1 / E2
 output = Min/ Max (E1, E2, E3) (minimum-/ maximum selector)
 output = (E1 + E2) / E3
 output = (E1 + E2) × E3

Functions: output = f (E1, E2, E3)
 User-defined functions possible based on pairs of variates (linearization).
 Other calculation functions on request.

Output:

I: load-independent DC current: 0(4)...20 mA permissible load max. 580 Ω
 connection: terminal 3 -, 4 +

U: load-independent DC voltage: 0(2)...10 V permissible load ≥ 1 kΩ
 connection: terminal 3 -, 4 +

The minimum/ maximum limits for current and voltage output are freely selectable and adjustable in clear text. On exceeding or falling below the limits at the output, the specified limit is set at the output (only within the error limits at the input).

Adjustment:

Measuring ranges and parameterization are adjustable in parameter data by KALIB-Software.
 You need a PC and the interface adapter USB2 with KALIB-Software.
