FUNCTION

The Limit Switch GS 2.00 GW is used for the control of limit values of standardized current or voltage signals.

Due to the 2 relays at the output with one potential free change-over contact each two switching functions can be realized. The switching status of the erected relay will be indicated by LED display.

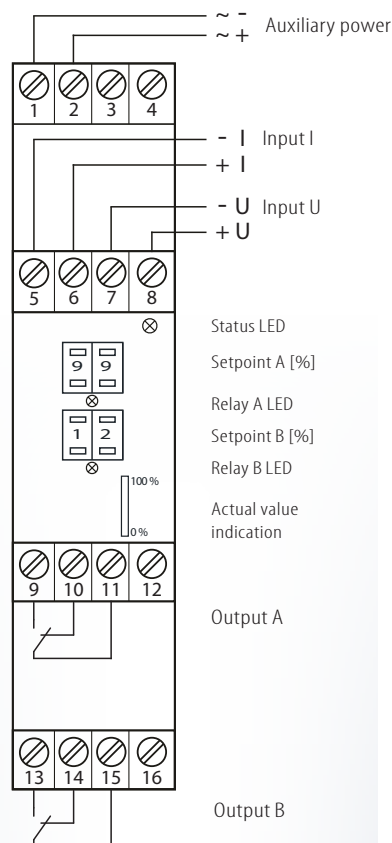

The switching point can be adjusted by the front side push-button the effective direction of the relay by the slide switch on the side.

The application range is e.g. threshold switch, supervisory relay, pump control of containers, control of final signals of positioning elements etc.
